### **DETAILED ACTION**

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-5, drawn to adjusting a first clock signal using a variable delay device in response to an alignment offset signal to substantially align the edge of the first clock signal to the center of data packet., classified in class 713, subclass 401.
  - II. Claims 6-16, drawn to a memory controller comprising a variable delay device having an output, a first input, and a second input, and a detector having a first input, a second input, and an output, classified in class 713, subclass 401.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions have different designs, and modes of operation.
